                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides compositions comprising ospC proteins and chimeric ospC proteins from members of the Borrella genus. These may be Borrella burgdorferi, B. afzelli or B. garinti. These can be used as vaccines against Borrella infection, which is spread by ticks and leads to Lyme disease.

                                                                                                                                                                                                              The present invention provides compositions comprising ospC proteins chimeric ospC proteins from members of the Borrelia genus. These may Borrelia burgdorferi, B. afzelli or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and lea to Lyme disease.
                                                                                                                                                                                                                                                                                                 Compositions of OspC polypeptides from strains of Borrelia which cause Lyme disease are used to immunize animals and detect immune responses

                  vaccines
to Lyme d
                       The present invention provides compositions comprising ospc protein chimeric ospC proteins from members of the Borrelia genus. These members of the Borrelia genus. These can be used Borrelia burgdorferi, B. afzelii or B. garinii. These can be used vaccines against Borrelia infection, which is spread by ticks and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        03-APR-2001
                                                            The present invention provides compositions comprising ospC proteins and chimeric ospC proteins from members of the Borrelia genus. These may be Borrelia burgdorferi, B. afzeli or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads
                                                                                                                                                                                                                           ်

These may be Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads
